NOW WITH VIDEO

The 320 CraneCom provides **FAIL-SAFE CRYSTAL CLEAR COMMUNICATIONS.**

Features include hands-free monitoring, backup battery, cable failure alarms and more. These features are not available with walkie-talkies.

Hard-wired Communications

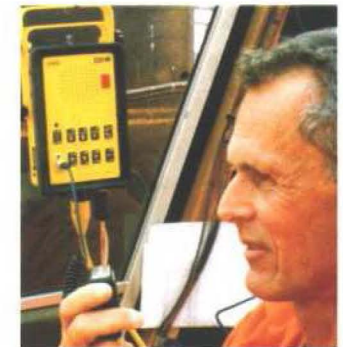

The signalman is the eyes and ears of the operator.

SIGNALMAN

Good reliable communications prevent accidents and greatly improve productivity, which equals profits. Working at such tight tolerances, a breakdown of communications can be disastrous.

Hard-wired communications provides a fail-safe link between the operator and signalman. This is not possible using walkie-talkies or wireless communication systems.

Walkie-Talkies: An Invitation for an Accident

"You're breaking up! Change the batteries! . . . Now someone is talking over you! Try another channel! . . . Now someone else is talking over you, go back to the other channel! . . . Hold the talk button down so I can monitor you. . . . Uh-Oh, breaking up again, try changing the batteries again! . . . No, that didn't work. Better call McKee!"
